

Carpool Rotation

Five families, two drivers a session — one takes them *there*, someone else brings them *back*. The rotation deals straight down the legs in order, so nobody ever drives both halves of the same day, and over every five sessions each family does exactly one drop-off and one pickup.

Season Sep 6, 2026 – Feb 7, 2027 32 team carpools 4 open gym 72 legs total
14–15 legs each

SUN DEC 13 Held open as a **potential competition day** — no carpool assigned. The gym is open, but nobody is on the hook to drive. If the meet doesn’t happen and you want a carpool that day, say so and it gets slotted back in.

Legs per family

Team sessions + open gym

FAMILY	THERE	BACK	TOTAL
Schapiro	7	7	14
Kuritsky	7	7	14
Laufer	8	7	15
Berkowitz	7	8	15
Bonan	7	7	14

72 legs across 5 families is 14.4 each, so two families necessarily carry one extra. That pair is set by the last open gym trip — currently *Laufer* and *Berkowitz*. Moving it to a different two is a one-line change; say the word.

Why it stays even. With five families and two legs a session, the pair on any given day is always two adjacent names in the cycle — so no one doubles up, and the there/back split evens out too, not just the totals.

Closed and blocked dates cost nobody a turn. They’re listed, then skipped. Whoever was up stays up and takes the next open session, so removing a date never lands two drives on one family.

Swapping. Trading is between the two families involved; the printed order doesn’t need to change and the totals stay square on a straight swap.
